

## How to Think About the Radar

From the perspective of the **Delivery Team**, if it's **on the Tech Radar** in:

- **Adopt:** Usage is generally **Encouraged**
- **Hold:** Usage is generally **Discouraged**
- **Trial:** **Approved for specific use cases**. Not yet approved generally.
- **Assess:** Promising new technology that we don't yet have experience with. We look for **opportunities for controlled experimentation** to inform whether to approve in certain use cases.

From the perspective of an **Architect**, when a delivery team requests moving something to **Trial or Assess**, they should ask:

- What is the potential value of the tool?
- Does it create unjustified fragmentation?
- Are there too many other experiments in-flight?
